The Problem

- Many internet users struggle with:
 - Identifying phishing links in real-time
 - Falling victim to online scams and fraud
 - Lack of simple tools for quick URL safety checks

Our Solution

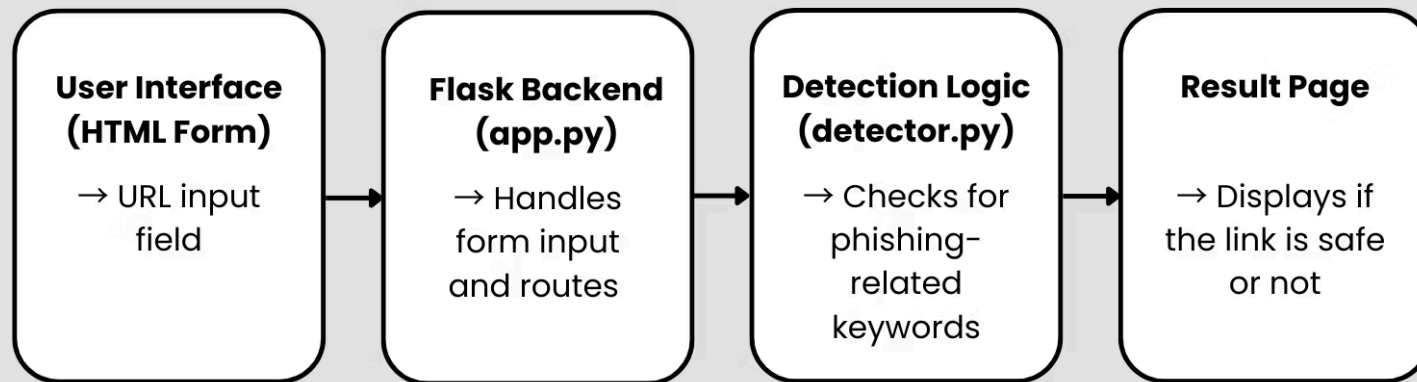

- We built a smart, web-based **phishing link detector**.
- Helps users:
 - **Instantly check URLs for phishing threats**
 - **Stay safe while browsing the internet**
 - **Build awareness against online fraud**

Technologies Used

- Frontend:
 - HTML
 - CSS
- Backend:
 - Python (Flask framework)
- Logic:
 - Simple string-based keyword matching

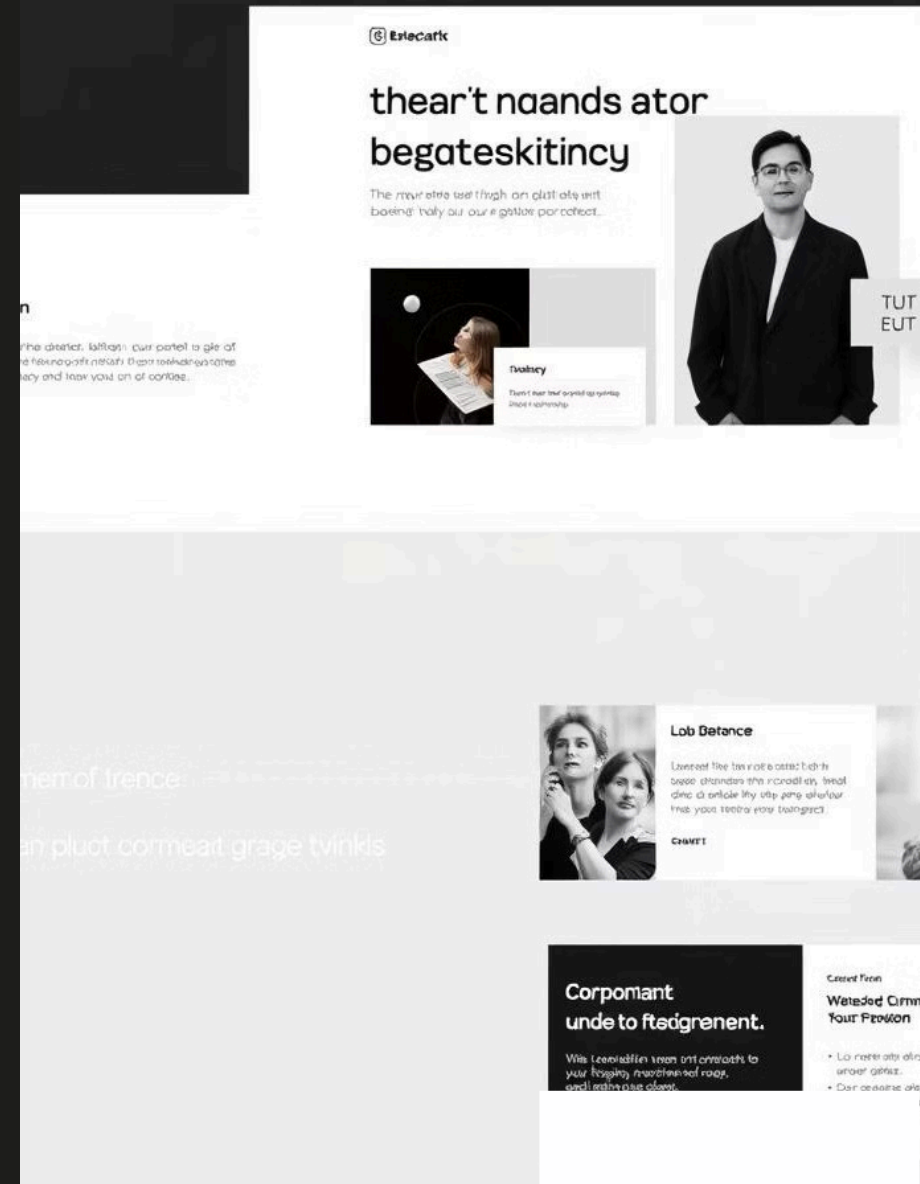

System Architecture

- **Block Diagram:**

Key Features of Our Websites

1. **Minimalistic and user-friendly web interface**
2. **Instant phishing check**
3. **Can be extended with Machine Learning or CSV datasets**
4. **Easy to deploy or host**

Demo

- Safe Link

Phishing Link Detector

Enter URL

Check

Input: <https://www.google.com/>

Result: Safe link.

Demo

- Phishing Link

Phishing Link Detector

Enter URL

Check

Input: <http://freelogin-prize.com>

Result: Phishing link detected!

Future Scope

- Integrate ML model trained on CSV of phishing URLs
- Add URL shortening detection
- Build browser extension from the same logic

Conclusion: Measuring and Improving Link Safety Awareness

100%

User Awareness

Empowers users to recognize and avoid phishing threats by instantly checking link safety.

0.5s

Detection Speed

Delivers real-time results with minimal delay using a lightweight Python backend.
